Metacognitive Reflection on Semester-Long Project

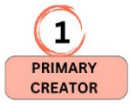
Write **600-700 words** in **one organized reflection**. You will have **60 minutes to write your reflection**. You may refer to the course description, learning outcomes, and your project materials.

AI Use:

In your reflection, address all five areas in one unified reflection:

1. what you learned about **business writing** by planning and creating various campaign content for your chosen audience and purpose
2. what you learned about **report writing** by repurposing and synthesizing your campaign work into a final recommendation report
3. how **AI** helped or hindered your work, and where **human judgment** was still necessary
4. one thing your team did well, and one thing you would change about your **collaborative process** next time
5. which **course learning outcome** you think you met most successfully, and which one still needs the most growth, using specific examples from your team's work

If needed, take an additional 10-15 minutes to complete light editing consistent with Level 1 of our student AI use scale.



Expectations

Your reflection should be **specific**, thoughtful, and **grounded in your actual experience with the project.** Use c**oncrete examples** from your team's work across the semester. Strong reflections will show clear thinking about writing, collaboration, AI, and learning, and will identify what you would do differently with more time, energy, or resources.
